Architecture for Health Visiting Lecture Series

Background

We are living in a dynamic time of accelerating change, in a context of instant global communications, a growing population, uncertain economies and fluctuating currencies, swirling political upheavals, amidst increasing public demands for accessible, affordable quality healthcare. The needs go far beyond just the design of health facilities, to planning, design and construction of healthy cities and healthy living, recreational, transportation and working environments.

Many architectural, landscape architecture, and construction firms are rapidly evolving how they practice in response to the changing environment.

Some firms have looked ahead and established offices around the world, others have combined interdisciplinary clinical research medical groups with their practices. Others have combined their interdisciplinary design capabilities with construction management, facility management and operation. Others have integrated financial services for design construction and operation of facilities. Servicing the projects with experienced professionals also is a challenge for human resource services within these firms.

Competing for and effectively undertaking international projects is very difficult and fraught with problems, pitfalls and opportunities.

Objective of Lecture Series

The objective of the Fall 2012 "Architecture for Health" Visiting Lecture Series is to provide a forum for discussion with experienced leaders who have and are successfully undertaking extensive "Architecture for Health" Practices on an international level. They will share their experiences in a series of weekly lectures focusing on actual case studies, at the College of Architecture at Texas A&M University. As always the series will be open for students, faculty, interested practitioners as well as to the general public

Problems, Pitfalls & Opportunities

International Architecture - for - Health Practice

The Architecture-for-Health Visiting Lecture Series meets 11:30 a.m. Wednesdays. See cover and schedule following for room locations. The series features topical lectures by distinguished members of the allied healthcare, design and building professions on issues related to improving healthcare and sustainable healthcare facilities design. Students attending the lectures can earn 1 credit hour by enrolling in ENDS 481, Section 500 for

undergraduates or Architecture 681, Section 601 for graduates. All lectures are required and a notebook with one-page lecture summaries must be turned in for credit.

All lectures are open to the public and additional lectures may be added during the semester.

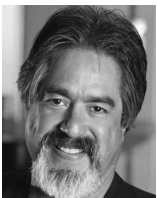

For more information, contact Judy Pruitt at 979.845.7009.
